

British Social Attitudes 2009 to 2014: Measurement levels

(Draft only: John F Hall 5 April 2016)

Many measurement levels are declared as **Nominal** when they are clearly **Ordinal**. Many others are partially ordered and could be converted to **Ordinal** with some recoding. Most **Scale** variables seem to have been declared. Variables using **Agree** ↔ **Disagree** and similar (High ↔ Low) rating scales (or summations of them) all need to be inspected: most of them have to be changed.

636	censor	 Nominal	Censorship ...	{-2, skip ...	LO - -1	0
637	leftrigh	 Scale	Left-right sc...	{-1.0000,...	LO - -1.0000	4

Variable [**censor**] is listed as **Nominal**, but this and all other **Agree** ↔ **Disagree** items are actually **Ordinal** and need to be changed, as do all items using ranked rating choices such as **Satisfied** ↔ **Dissatisfied** and **A lot** ↔ **Not at all**.

Some variables are partially ranked, and declared as **Nominal**, but can be recoded and re-specified as **Ordinal**, e.g:

```
-1 = "Not applicable"
1 = "Benefits for unemployed people too low - cause hardship"
2 = "Benefits for unemployed people too high - discourage work"
3 = "(Neither)"
4 = "BOTH: UNEMPLOYMENT BENEFIT CAUSES HARDSHIP BUT CAN T BE HIGH"
5 = "BOTH: UNEMPLOYMENT BENEFIT CAUSES HARDSHIP TO SOME, WHILE OT"
6 = "ABOUT RIGHT/IN BETWEEN"
7 = "Other answer (WRITE IN)"
8 = "Don't know"
9 = "Refused"
```

From row 952 onwards, measurement levels seem to have been correctly declared, particularly **Ordinal**.

CLOSTOW2 How close do you feel to.your town or city A2.1a

EthncAid Ethnic minorities should be given government assistance to preserve their customs and traditions. A2.7b

Immigrt1 Immigrants increase crime rates. A2.9a

Citzshp5` Legal immigrants should have equal access to public education as British citizens. A2.9h

However the variable labels include question numbers at the end.

952	CLOSTOW2	 Ordinal	How close do you feel to.your town or city A2.1a	{
953	CLOSCNTY	 Ordinal	How close do you feel to.your county? A2.1b	{
954	CLOSBRT2	 Ordinal	How close do you feel to.Britain A2.1c	{
955	CLOSEUR2	 Ordinal	How close do you feel to.Europe A2.1d	{

[These look like Roger Stafford's work in progress, and may need the Jon Peck treatment]

There are 2588 variables in the working file. The variables are listed below in groups corresponding to their required measurement levels, but for **Nominal** I have used subgroupings such as “binary” and “partially ranked”. Within “binary” I have included multiple response sets where the only value of interest is 1 *Mentioned*.

The numbers below refer to the row number of the variable(s) in the combined file.

Sample:

3 [**SPoint**] to 11 [**Country**]

All (**Nominal**) and OK apart from [WtFactor] and [OldWt] which should be (**Scale**)

Household:

12 [**Rsex**] to 115 [**RelNone3**]

All OK

Nominal (Binary): (Yes/No or choice of two answers)
