## 3.2: Three (or more) variables

### 3.2.1.2 Elaboration 2 (Income differences BSA 2009-2014)

(Replication of elaboration exercise 3.2.1.1 using data from BSA 2009 to 2014)
This set of tutorials uses data from the British Social Attitudes series to explore the following research questions.

1: Is there a difference between the earnings (from paid work) of men and women?
2: What other variables might account for differences in earnings?
3: What effect do they have by themselves?
4: What happens to any differences in earnings between men and women when controlling for these other variables?

## Model

Logical model is $\mathbf{X} \rightarrow \mathbf{Y} . \mathbf{T}$ (the effect of $\mathbf{X}$ on $\mathbf{Y}$ controlling for $\mathbf{T}$ ) where:
Y = Dependent variable
X = Independent variable
T = Test variable(s)
(See Elaboration (extract from Jim Ring's Statistical Notes specially written for this course)

## $Y$ (Dependent) $\quad X$ (Independent) $\quad T_{n}$ (Test or control)

Gross earnings Sex $\quad \mathrm{T}_{1} \quad$ Working full time or part time
from paid work
$\mathrm{T}_{2} \quad$ Employee or self employed
$\mathrm{T}_{3} \quad$ Level of education
$\mathrm{T}_{4}$ Age
$\mathrm{T}_{5} \quad$ Economic sector
$\mathrm{T}_{6} \quad$ Socio-economic grade of work
$\mathrm{T}_{7} \quad$ Geographical region

Data source: British Social Attitudes 1983 to 2014: Cumulative SPSS file,
Tutorial 3.2.4.1 Income differences - Elaboration used data from the 1989 wave of the British Social Attitudes Survey (BSAS) to analyse differences between the earnings of men and women from paid work. This new tutorial replicates that exercise on data from the 2009 to 2014 waves.

The cumulative mother file for 1983 to 2014 contains 95,630 cases and 10,773 variables. Not all variables are present in all waves. Even when they are, they may have different coding schemes.

For most variables in this and related exercises, I have retained the original metadata (variable names, variable labels, value labels, missing values, measurement levels, formats) but have added these where they were absent or modified them where they were confusing, incomplete or incorrect.

Positive missing values have been changed to negative, including some which, though undeclared, are clearly intended as missing. Where necessary I have created a new variable.

| Dependent variable: | Description | Name |
| :---: | :--- | :--- |
| Gross earnings | Grouped as per showcard | rearn |
| from paid work | Grouped by deciles (2014 labels) | rearnq |
| (if working) | Grouped by quartiles (2014 labels) | rearnq |
|  | Grouped by quartiles (new labels) | rearngrp |

Variable [rearn] "Grouped gross earnings" is present in all waves from 1983 to 2010, with values ranging from 1 to 24 (Earnings groups) 0 (Skipped) and 97 to 99 (missing, but not declared) with category boundaries maintained, but upward movement of earnings over time has resulted in empty counts, depending on the year. In 1983 the codes range from 1 to 11, in 20013,5, 7 to 24, in 20081-17. Value 0 (skipped) only appears from 1983 to 1991. Grouping categories for earnings codes have changed over the years and have different ranges: they are inconsistent and therefore too complex to use for the purpose of this exercise.

From 2011 onwards, variable [rearn] is not included in the distributed data: it has been replaced by derived variables [rearnd] "Decile groups of R's gross earnings" and [rearnq] "Quartile groups pf R's gross earnings". For this exercise I have selected [rearnq] which groups earnings into four categories, each containing approximately $25 \%$ of the sample, but is available only for years 2009 to 2014. Because the quartile cutting points are different between waves, I have created a new variable [earngrp] from [earnq] and given it different labels indicating quartiles rather than ranges.

Independent variable:
Sex of respondent
Description
Male/Female
Name
Rsex

Variable [rsex] is present in all waves and has no missing values. Users may prefer to rename it as [sex] or [gender] according to their preferences.

Which other variables to include?

## Test variables:

Description
Name
$\left.\begin{array}{lll}\text { Work-related } & \begin{array}{l}\text { Employee/Self-employed } \\ \text { Hours worked } \\ \text { Social class of job } \\ \text { Private / public sector }\end{array} & \begin{array}{l}\text { remploye } \\ \text { ejbhrcax } \\ \text { rnsoccl }\end{array} \\ \text { rsector } \\ \text { (not used in 2009-2014) } \\ \text { rocsect2 used instead. }\end{array}\right\}$

## Stage 1: Extraction of variables from mother file ${ }^{1}$

## 1.1: Locate and open cumulative mother file: bsa1983-2014mother13

[NB: This file is pass-word protected: access is via a Dropbox link and users need to be currently licenced at UKDS and registered for use of BSA data. However you can follow the tutorial without this or later files, and without access to SPSS]

Mother file has 10773 variables

and 95630 cases

1.2: Create a new working file containing the dependent, independent and selected test variables, plus wave, weight and case ID number:

| Admin: | caseid year wtfactor |
| :--- | :--- |
| Dependent: | rearnq |
| Independent: | rsex |
| Test: | remploye rocsect2 ejbhrcax rnsoccl <br> tea schqual pschqual hedqual3 <br> ragecat3 gor2 country rage |

[NB: caseid is computed from the SPSS reserved variable name \$casenum (the row number of the case in the mother file). It will be needed as a key for adding new variables from the mother file or for restoring the order of cases after any sorting.]

[^0]1.3: Extract and save the selected variables

SPSS command SAVE
[General format\} save outfile '<drive>:1<pathway><<filename>.sav' /keep <varlist>.

File >> New >> Syntax to open a new Syntax Editor:

For the selected variables (on my computer: yours may be different) type in the following lines:

```
title 'Replication of exercise 3.2.4 (1989) on BSA 2009 to 2014'.
save outfile = 'C: \Users\John\Desktop\Elaboration\bsa83-14_elab1.sav'
    /keep caseid year WtFactor
        REarnQ RSex
        REmploye ROcSect2 EJbHrCaX RNSocCl
        Tea SchQual PschQual HEdQual3
        RAgecat3 gor2 country rage.
```

Don't forget the full stops (periods) to mark the end of each command !!

To run the job click on Run >> All

[File bsa83-14_elab1.sav has now been saved in folder Elaboration on my Desktop.]

Close file bsa1983-2014mother13
Keep the Syntax Editor open.

## 1．4 Navigate to folder Elaboration and find：

| Pip bsa83－14＿elab1 | 02／08／2016 07：06 | SPSS Statistics Dat．．． | $3,720 \mathrm{~KB}$ |

The Data Editor contains 17 variables extracted from the mother file．
You can slide the column dividers to see more of the labels and hide the attributes you don＇t really need：

It is useful to have hard copies of file information.

### 1.5 Go back to your Syntax Editor

1.6: To see a list of variable labels, type (from line 8):
subtitle 'Check contents of file'. display labels.
[NB: display command not available from the GUI]
To run the display command, place cursor in the line and use Ctrl $\mathbf{B}$ or press $\mathbf{D}$.

| Variable Labels |  |  |
| :--- | ---: | :--- |
| Vasiable | Position |  |
| caseid | 1 | Label |
| year | 2 | Yeare> of Interview |
| WtFactor | 3 | Final BSA weight |
| REarnQ | 4 | Respondent earnings quartiles (dv) |
| Rsex | 5 | Person 1 SEX |
| Remploye | 6 | Respondent currently employee or self-employed dv |
| ROcSect2 | 7 | Which of the types of organisation on this card do/did you work for? |
| EJbHrCaX | 8 | Hours R works per week, excluding overtime [employee]. DV |
| RNSocCl | 9 | Respondent : social class [pre-SOC2000] best estimate dv |
| Tea | 10 | How old when completed your continuous full-time education?[compressed] dv |
| SchQual | 11 | Have you passed any school examinations |
| PschQual | 12 | Have you achieved any post-school qualifications |
| HEdQual3 | 13 | Highest educational qual obtained - dv |
| RAgecat3 | 14 | Age of respondent(grouped)<6 category> dv |
| GOR2 | 15 | Government office region 2003 version |
| Country | 16 | England, Scotland or Wales? |
| Rage | 17 | Person 1 age last birthday |

Variables in the working file
[NB: The above table was edited in Pivot Tables to shorten inordinately long variable labels and drag the right hand margin out, extracted from the SPSS output with: [right click] > Copy then pasted into this tutorial with $\mathbf{C t r l}+\mathbf{V}$ ]
1.7: To see a table of variable attributes, type:
display variables.
[NB: display command not available from the GUI]
To run the command, place cursor in the line and use $\qquad$ or press

| Humberside |  |  |  |  |
| 4 East Midlands | 1624 | 8.4 | 8.4 | 34.4 |
| 5 West Midlands | 1817 | 9.4 | 9.4 | 43.8 |
| 6 SW | 1689 | 8.7 | 8.7 | 52.5 |
| 7 Eastern | 1936 | 10.0 | 10.0 | 62.4 |
| 8 Inner London | 712 | 3.7 | 3.7 | 66.1 |
| 9 Outer London | 1211 | 6.2 | 6.2 | 72.4 |
| 10 South East | 2576 | 13.3 | 13.3 | 85.6 |
| 11 Wales | 1054 | 5.4 | 5.4 | 91.1 |
| 12 Scotland | 1733 | 8.9 | 8.9 | 100.0 |
| Total | 19399 | 100.0 | 100.0 |  |

[Keep for now: may need fewer groups later, but could always compare two regions]
Country England, Scotland or Wales?

|  |  | Frequency | Percent | Valid Percent | Cumulative Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 England | 16612 | 85.6 | 85.6 | 85.6 |
|  | 2 Scotland | 1733 | 8.9 | 8.9 | 94.6 |
|  | 3 Wales | 1054 | 5.4 | 5.4 | 100.0 |
|  | Total | 19399 | 100.0 | 100.0 |  |

[Keep for now]
2.3 Using FREQUENCIES to tabulate variables with many values (eg. Age last birthday) creates large tables: better to produce a summary with DESCRIPTIVES.
*rage has many values.
descriptives rage/sta min max.
Descriptive Statistics

|  | N | Minimum | Maximum |
| :--- | :--- | :--- | ---: |
| Rage Person 1 age last birthday | 19367 | 17 | 97 |
| Valid N (listwise) | 19367 |  |  |

[97 = "97 or older", 98, "Don't know" and 99 "Refused" already missing]

### 2.4 Save your work again!

Syntax Editor *Syntax2 should look something like this:

File >> Save As

| Look in: | 1. Elaboration |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
| Change | Syntax2 to | bsa83-14_elab2.sps |  | and click on |
| File name: | Syntax2 | File name: | bsa83-1/4_elab2 | Save |
| Save as type: | ype: Syntax (*.sps) | Save as type: | Syntax (*.sps) |  |

File bsa83-14_elab1.sav has been changed by selecting only cases from 2009 to 2014. You can save it with $\mathbf{C t r l} \boldsymbol{S}$ but best practice is to save it with a new name: bsa83-14_elab2.sav.

File >> Save As

Your new files are now both saved in folder Elaboration

| - bsa83-14_elab2 | $02 / 08 / 2016$ | $12: 05$ |
| :--- | :--- | :--- |
| SPSS Statistics Data Document |  |  |
| bsa83-14_elab2 | $02 / 08 / 2016$ 11:20 | SPSS Statistics Syntax File |

As an alternative to File >> Save As you could also add a line of syntax:
save outfile ='C:\Users\John\Desktop\Elaboration\bsa83-14_elab2.sav'.
but you would then have to navigate to the folder and open it. File >> Save As renames the working file and keeps it open, leaving the previous version unchanged.

You can stop here and carry on later if you like. Take a break.

## Stage 3: Tidy up metadata:

3.1 For file bsa83-14_elab2.sav we now need to add or correct value labels, formats, measurement levels and missing values.

File >> New >> Syntax to open a new Syntax Editor:

. . then type in the following syntax:
title 'Tidy up metadata in bsa89-14_elab2.sav'.
recode
rearnq (7=-7)(8=-8)(9=-9)(97=-97)
/rocsect2 (7=-7)(8=-8)(99=-99)
/EJbHrCaX ( $8=-8$ )( $9=-9$ )
/tea (97=-97)
/hedqual3 ( $8=-8$ ).
formats caseid hedqual3 (f2.0).
missing values
REarnQ to EJbHrCaX tea to rage (lo thru -1)
/RNSocCl (7, lo thru-1).
add value labels
rearnq -97 "Refused information"
rocsect2 -7 'Other' -8 'Edit' -99 'Not answered'
/EJbHrCaX -8 "Don't know" -9 'Refusal'
/tea -97 "Other answer"
/hedqual3-8 'DK/Refusal/NA'.
[NB: add value labels is needed here: value labels would over-write all the other labels.]

To run the job click on Run >> All

If it runs without error use $\mathbf{C t r l} \mathbf{S}$ to save the syntax. If there are errors keep correcting them until error-free, then Ctrl Sagain.

### 3.2 Save your work.

Syntax Editor File >> Save As
Data Editor File >> Save As
bsa83-14_elab3.sps
bsa83-14_elab3.sav

## Stage 4: Derived variables

4.1 Create two derived variables earngrp and workmode:
earngrp (same as rearnq, but with categories relabelled to indicate quartiles:
approximately $25 \%$ of sample in each category)
workmode (hours worked reduced to two categories: 30 hours or more; under 30 hours)
Specify formats, measurement levels, missing values, variable and value labels (NB: new value labels needed for earngrp as income ranges for rearnq change between waves)

File >> New >> Syntax to open a new Syntax Editor:

. . then type in the following syntax:
title 'Create derived variables'.
compute earngrp = rearnq.
compute workmode $=\mathrm{EJbHrCaX}$.
recode workmode (01235=2)(4=1).
formats
earngrp workmode (f2.0).
missing values
earngrp workmode (lo thru -1).
variable level
rearnq earngrp (ordinal)
workmode (nominal) .
variable labels
earngrp "Quartile group of R's earnings from paid work" /workmode 'R working full- or part-time'.
value labels
earngrp
1 'Q1' 2 'Q2' 3 'Q3' 4 'Q4'
/workmode
1 'Full time' 2 'Part time'
-8 "Don't know" -9 'Refusal' -1 'Not employee'.

To run the job click on Run >> All

If it runs without error use $\mathbf{C t r l} \mathbf{S}$ to save the Syntax Editor as bsa83-14_elab4.sps. If there are errors keep correcting them until error-free, then Ctrl S again.

## 4.2: After modiflcations, always check your data!

*Check frequencies for new variables.
frequencies earngrp workmode.
earngrp Quartile group of R's earnings from paid work

|  |  | Frequency | Percent | Valid <br> Percent | Cumulative <br> Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 Q1 | 2157 | 11.1 | 24.5 | 24.5 |
|  | 2 Q2 | 2430 | 12.5 | 27.6 | 52.2 |
|  | 3 Q3 | 2196 | 11.3 | 25.0 | 77.2 |
|  | 4 Q4 | 2006 | 10.3 | 22.8 | 100.0 |
|  | Total | 8789 | 45.3 | 100.0 |  |
| Missing | System | 10610 | 54.7 |  |  |
| Total |  | 19399 | 100.0 |  |  |

workmode R working full- or part-time

|  |  | Frequency | Percent | Valid <br> Percent | Cumulative <br> Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 Full time | 6020 | 31.0 | 72.5 | 72.5 |
|  | 2 Part time | 2282 | 11.8 | 27.5 | 100.0 |
|  | Total | 8302 | 42.8 | 100.0 |  |
| Missing | System | 11097 | 57.2 |  |  |
| Total |  | 19399 | 100.0 |  |  |

4.3: Select only cases with valid values for earngrp (and check your data again):

```
select if not (missing (earngrp)).
frequencies earngrp.
```

earngrp Quartile group of R's earnings from paid work

|  |  | Frequency | Percent | Valid <br> Percent | Cumulativ <br> e Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 Q1 | 2157 | 24.5 | 24.5 | 24.5 |
|  | 2 Q2 | 2430 | 27.6 | 27.6 | 52.2 |
|  | 3 Q3 | 2196 | 25.0 | 25.0 | 77.2 |
|  | 4 Q4 | 2006 | 22.8 | 22.8 | 100.0 |
|  | Total | 8789 | 100.0 | 100.0 |  |

[NB: A quartile is not a group, it's a cutting point: value 1 = "Above top quartile", value 4 = "Below bottom quartile"]
[NB: This a permanent selection. All cases with no valid values for earngrp have been discarded and the sample size has now been reduced from 19,399 to 8,789]

## 4.4: Save your work again!

You could use Ctrl S again to save the current working file, but that would permanently lose cases from the earlier file(s). It is far preferable (and good professional practice) to save a new file with a different name: the earlier file(s) will be unaffected and cases will be retained.

File >> Save As to save your Syntax Editor as bsa83-14_elab4.sps
File >> Save As to save the Data Editor as bsa83-14_elab4.sav
Take a break. You can stop here and carry on later if you like.

Stage 5: Check contents of file
5.1: In file bsa83-14_elab4.sav check the frequencies of variables in the model.

File >> New >> Syntax
Dependent variable Quartile group for earnings from paid work: rearnq
*check initial frequencies.
*Dependent variable.
frequencies rearnq.
REarnQ Respondent earnings quartiles (dv)

|  |  | Frequency | Percent | Valid <br> Percent | Cumulative <br> Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 Less than $£ 930$ p.m. | 2157 | 24.5 | 24.5 | 24.5 |
|  | $2 £ 931-1,600$ p.m. | 2430 | 27.6 | 27.6 | 52.2 |
|  | $3 £ 1,601-2,500$ p.m. | 2196 | 25.0 | 25.0 | 77.2 |
|  | $4 £ 2,501$ or more p.m. | 2006 | 22.8 | 22.8 | 100.0 |
|  | Total | 8789 | 100.0 | 100.0 |  |

[OK, but labels confusing: use earngrp instead]
New dependent variable Quartile group for earnings from paid work: earngrp
*New dependent variable.
frequencies earngrp.
earngrp Quartile group of R's earnings from paid work

|  |  | Frequency | Percent | Valid <br> Percent | Cumulative <br> Percent |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Valid | 1 Q1 | 2157 | 24.5 | 24.5 | 24.5 |
|  | 2 Q2 | 2430 | 27.6 | 27.6 | 52.2 |
|  | 3 Q3 | 2196 | 25.0 | 25.0 | 77.2 |
|  | 4 Q4 | 2006 | 22.8 | 22.8 | 100.0 |
|  | Total | 8789 | 100.0 | 100.0 |  |

[My emphasis: there are 2006 cases above the upper quartile. Later on we will use these cases as a criterion group.]

Independent variable Sex rsex
*Independent variable.
frequencies rsex.
Rsex Person 1 SEX

$\left.$|  |  |  | Frequency | Percent | Valid <br> Percent |
| :--- | :--- | ---: | ---: | ---: | ---: | | Cumulative |

|  | Total | 3163 | 36.0 |  |  |
| Total | 3164 | 36.0 |  |  |  |

[RAgecat3 has too many missing values: sample reduced to 5625. Better to derive new age groupings from rage]

Test variables: Location

## GOR2 Government office region 2003 version

|  |  | Frequency | Percent | Valid Percent | Cumulative Percent |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Valid | 1 North East | 444 | 5.1 | 5.1 | 5.1 |
|  | 2 North West | 1024 | 11.7 | 11.7 | 16.7 |
|  | 3 Yorks and Humberside | 725 | 8.2 | 8.2 | 25.0 |
|  | 4 East Midlands | 721 | 8.2 | 8.2 | 33.2 |
|  | 5 West Midlands | 801 | 9.1 | 9.1 | 42.3 |
|  | 6 SW | 772 | 8.8 | 8.8 | 51.1 |
|  | 7 Eastern | 958 | 10.9 | 10.9 | 62.0 |
|  | 8 Inner London | 346 | 3.9 | 3.9 | 65.9 |
|  | 9 Outer London | 563 | 6.4 | 6.4 | 72.3 |
|  | 10 South East | 1253 | 14.3 | 14.3 | 86.6 |
|  | 11 Wales | 416 | 4.7 | 4.7 | 91.3 |
|  | 12 Scotland | 766 | 8.7 | 8.7 | 100.0 |
|  | Total | 8789 | 100.0 | 100.0 |  |

[Can always derive different groupings, or, if sufficient cases, compare two regions]
Country England, Scotland or Wales?

|  |  |  |  |  | Cumulative |
| :--- | :--- | ---: | ---: | ---: | ---: |
| Frequency | Percent | Valid Percent | Percent |  |  |
| Valid | 1 England | 7607 | 86.6 | 86.6 | 86.6 |
|  | 2 Scotland | 766 | 8.7 | 8.7 | 95.3 |
|  | 3 Wales | 416 | 4.7 | 4.7 | 100.0 |
|  | Total | 8789 | 100.0 | 100.0 |  |

End of tutorial: 3.2.1.2 Elaboration 2 (Income differences BSA 2009-2014)
[Last updated: 11 August 2016]
Next tutorial: 3.2.1.3 Elaboration 3 (Income differences 2009-2014_CROSSTABS)
(Zero-order tables to answer research questions 1 to 3 )
1: Is there a difference between the earnings (from paid work) of men and women?
2: What other variables might account for differences in earnings?
3: What effect do they have by themselves?
Back to page: 3.2 Three (or more) variables

## Appendix: SPSS syntax listings

Stage 1: Extraction of variables from mother file

## bsa09-14_elab1.sps

* Encoding: UTF-8.
title 'Replication of 3.2.4 (1989) on BSA 2009 to 2014'.
*bsa83-14.
save outfile ='C:\Users\John\Desktop\Elaboration\bsa83-14_elab1.sav'
/keep caseid year WtFactor REarnQ RSex
REmploye ROcSect2 EJbHrCaX RNSocCl
Tea SchQual PschQual HEdQual3
RAgecat3 gor2 country rage .
subtitle 'Check contents of file'.
display labels.
display variables.
*Check no of cases.
frequencies rsex.

Stage 2: Selecting years 2009 to 2014 only

## bsa83-14_elab2.sps

title 'Select years 2009 to 2014 only'.
select if ((year ge 2009) and (year le 2014)).
*check frequencies.
frequencies rsex year.
subtitle 'Check initial frequencies'.
*Dependent variable.
frequencies rearnq.
*Independent variable.
frequencies rsex.
*test variables.
frequencies remploye to country.
*rage too long.
descriptives rage /sta min max.
*optional.
save outfile ='C:\Users\John\Desktop\Elaboration\bsa83-14_elab2.sav'.

## Stage 3: Tidy up metadata:

## bsa83-14_elab3.sps

title 'Tidy up metadata'.

## formats

hedqual3 (f2.0).
recode
rearnq ( $7=-7$ )( $8=-8)(9=-9)(97=-97)$
/rocsect2 (7=-7)(8=-8)(99=-99)
/EJbHrCaX ( $8=-8$ )(9=-9)
/tea (97=-97)
/hedqual3 ( $8=-8$ ).
missing values
REarnQ to EJbHrCaX tea to rage (lo thru -1)
/RNSocCl (7, lo thru -1).
add value labels
rearnq -97 "Refused information"
/rocsect2 -7 'Other' -8 'Edit' -99 'Not answered'
/EJbHrCaX -8 "Don't know" -9 'Refusal'
/tea -97 "Other answer"
/hedqual3 -8 'DK/Refusal/NA'.
*optional.
save outfile ='C:\Users\John\Desktop\Elaboration\bsa83-14_elab3.sav'.

## Stage 4: Derived variables

## bsa83-14_elab3.sps

```
title 'Derive new variables'.
compute earngrp = rearnq.
compute workmode = EJbHrCaX.
recode workmode (0 1235=2)(4=1).
formats earngrp workmode (f2.0).
missing values earngrp workmode (lo thru-1).
variable level rearnq earngrp (ordinal) workmode (nominal).
variable labels
    earngrp "Quartile group of R's earnings from paid work"
    /workmode 'R working full- or part-time'.
value labels
    earngrp 1 'Q1' 2 'Q2' 3 'Q3' 4 'Q4'
    /workmode 1 'Full time' 2 'Part time'
    -8 "Don't know" -9 'Refusal' -1 'Not employee'.
    *Check frequencies for new variables.
frequencies earngrp workmode.
*Select cases with valid values for earnings.
select if not (missing (earngrp)).
frequencies earngrp.
*optional.
save outfile ='C:\Users\John\Desktop\Elaboration\bsa83-14_elab4.sav'.
```

[^0]:    ${ }^{1}$ I am seeking authorisation from Natcen and UKDS to have the small teaching file from this exercise stored on my site and downloadable on request.
