

British Social Attitudes 1983-2014

4.4: Sequence of operations

Copyright © 2016 John F Hall

(Draft only: 25 April 2016)

Checking measurement levels and Identifying variables with values ending in **8** or **9**, which should be treated as missing, has been extremely complex and thrown up some problems with SPSS even after careful programming. When the file is sorted so that value labels with high positive values are displayed in the **Values** column of the **Data Editor**, there are some variables which do not appear to have been picked up. There are many variables with values **8, 98, 9, 99** etc which are missing, but are not so declared.

As an intermediate stage I copied the file and used:

SORT VARIABLES by values (d).

. . to produce a new **Data Editor** in which value labels beginning with **8, 98, 9, 99** etc., which should be treated missing, but which are not, are displayed in the **Values** column:

	Name	Measure	Label	Values	Missing
15	intcompt	Ordinal	Time interview ...	{9999, Not Answ...}	None
16	strttime	Ordinal	Time interview ...	{9999, Not Answ...}	None
17	ScenF09	Nominal	Child M follow-...	{9998, Don't know}...	-9 - -1
18	ScenF08	Nominal	Child M follow-...	{9998, Don't know}...	-9 - -1
19	ScenF07	Nominal	Child M follow-...	{9998, Don't know}...	-9 - -1

48	HhCh511	Nominal	Number of chil...	{99, Refusal}...	LO - -1
49	HhCh04	Nominal	Number of chil...	{99, Refusal}...	LO - -1
50	NumCh2	Nominal	Number of Re...	{99, Not answered}...	-1, -2
51	NumAd	Nominal	Number of adu...	{99, Not answered}...	-1, -2
52	norooms	Ordinal	How many roo...	{99, Not answer...}	None
53	dwelling	Ordinal	'Number of dw...	{98, Dont know}...	None
54	tnc	Ordinal	'Total number ...	{98, Dont know}...	None

My plan is to identify these positive values and recode them to negative values -8, -9, -98, -99 etc

RECODE

```
<varlist1> (8 = -8) (9 = -9)
/<varlist2> (88 = -88) (99 = -99)
~~~~~.
```

These negative values will then be picked up by:

MISSING VALUES <varlis> (Lo thru -1).

However there are some variables in the intermediate file which, although they contain values **98, 99** etc, do not display **98** or **99** in the Values column. For example:

VoteEU Scale Party Respondent voted for in european election? Q1028 {1, Yes: voted}

I expected

SORT VARIABLES by values (d).

to display:

VoteEU Scale Party Respondent voted for in european election? Q1028 {98 Don't know }

... but the frequency table shows:

VotedEU Did Respondent vote in european election 2004? Q1027

		Frequency	Percent	Valid Percent	Cumulative Percent
Valid	-2	2083	2.2	19.6	19.6
	1 Yes: voted	3358	3.5	31.6	51.3
	2 No	4992	5.2	47.0	98.3
	97 (Refused to say)	26	.0	.2	98.6
	98 Don't know	151	.2	1.4	100.0
	Total	10610	11.1	100.0	
Missing	System	85020	88.9		
	Total	95630	100.0		

Note that **VoteEU** is declared as **Scale**, but is actually **Nominal**.

Because of the complexity and size of file **bsalatest3.sav** I made the changes in stages using a series of SPSS *.sps and *.sav files.

Stage 1:

bsa_setlevels1.sps

SAVE OUTFILE='C:\Users\John\Desktop\British Social Attitudes\BSA 1983-2014\bsa combined '+
'files\bsa_setlevels1.sav' /COMPRESSED.

Stage 2:

bsa_set levels2.sps

SAVE OUTFILE='C:\Users\John\Desktop\British Social Attitudes\BSA 1983-2014\bsa combined '+
'files\bsa_setlevels2.sav' /COMPRESSED.

Stage 3:

bsa_setmissing1.sps

SAVE OUTFILE='C:\Users\John\Desktop\British Social Attitudes\BSA 1983-2014\bsa combined '+
'files\bsa_setmissing1.sav' /COMPRESSED.

Got a problem here as SPSS won't open another file: could be stuck in a sort. Close and start over.

Latest file is **bsa_setmissing1.sav**

Close for the night: tomorrow do

findmissing1.sps

findmissing2.sps

23 April (St George's Day)

Variables which still have 99

HhCh04 HhCh511 HhCh1215 HhCh1617 RCh04 RCh511 RCh1215 RCh1617

Levels not set

Taxspend idstrng

Separate *.sps files:

These *.sps files set levels for ordinal and nominal, change positive missing values to negative and add value labels to negative missing values.

bsa_setordinal1.sps
bsa_setnominal1.sps
bsa_resetmissing_addvaluelabels1.sps

. . after which the first *.sav file was:

bsa_recodevallab1.sav (06:50)

Still to change:

The following list was built up copying variable names from the **Names** column of the **Data Editor** under separate /* headings to enable copying into a **Syntax Editor** and run with SPSS. The blocks of variable names cannot be entered using <var1> to var2> because they are not necessarily in same order in each wave. The names are therefore copied individually. The blocks can then be copied into SPSS commands **VARIABLE LEVEL**, **RECODE**, **MISSING VALUES** and **ADD VALUE LABELS**.
