[NB: All video tutorials for chapter 5 are on the same web page and cannot (yet) be disaggregated]
Video 5.1.7: Creating and editing a Histogram of [depress] (7'05")
Because [cldgng] is not available for Albanian respondents, JM gave them an imputed depression score by multiplying their score on the other seven items by a factor of $8 \div 7$ and produces a frequency table for depression.

| jmdepress |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Frequency | Percent | Valid Percent | Cumulative Percent |
| Valid | 7.00 | 2 | . 0 | . 0 | . 0 |

|  | 31.00 | 48 | . 1 | . 1 | 99.8 |
|  | 32.00 | 87 | . 2 | . 2 | 100.0 |
|  | Total | 55671 | 98.0 | 100.0 |  |
| Missing | System | 1164 | 2.0 |  |  |
| Total |  | 56835 | 100.0 |  |  |

The table has an uneven distribution of frequency counts because of the fractional scores created, so JM says, " . it's not too easy to interpret and there are far too many numbers." He suggests one way round this is to use graphics and says a histogram would give a better idea of the distribution.

```
freq depress
    /histogram.
```

[NB: He has already produced the frequency table: this command produces another frequency table. If a hard copy of the output is printed, this would be a waste of paper. It is better to suppress the frequency table and display only the histogram:

## frequencies depress /format notable /histogram.

. . suppresses the frequency table and yields a chart with high columns for integer scores interleaved with small ones for the fractional scores.

Proceeds to change the width of the bins by double clicking on the chart

Cases weighted by Population size weight (must be combined with dweight or pspwght)

亚 5
. . to bring up the Chart Editor. Double click on any bar in the Chart Editor

MacInnes 5.1.7: Creating and editing a histogram
. . to open the Properties window:

Click on the Custom button
. . and enter the number $\mathbf{2}$ in the Interval width box
(0) $X$ axis only
(c) $Z$ axis only
(-) $X$ and $Z$ axes
X Axis
O Automatic
© Custom
(O) Number of intervals: 0 $\qquad$ O Interval width:
$\square$ Custom value for anchor: 142857142861
Z Axis
(0) Automatic
© Custom
© Number of intervals:
© Interval width:
Custom value for anchor

. . to yield a histogram with wider bins, ". .which is much easier to interpret."

JM comments on the "tail" of people to the right, but misses the opportunity to mention skew.
Doesn't point out that, for Ordinal variables, because there is no fixed interval between the points, a barchart has spaces between the bars, but for Scale variables, which have a fixed interval between the points, the bars in a histogram are actually touching.

A mean of 15.4 with a standard deviation of 4.56 on a scale ranging from 8 to 32 is not particularly intuitive, so he demonstrates that the depression score can be standardised to have a mean of $\mathbf{0}$ and a standard deviation of 1 .

Analyze >> Descriptive Statistics >> Descriptives

Maclnnes 5.1.7: Creating and editing a histogram

Check Save standardized values box then Paste
to get z-scores but it doesn't work so he types in syntax direct:
desc depress
/save .

| Descriptive Statistics |  |  |  |  |  |
| :--- | ---: | ---: | ---: | ---: | ---: |
|  | N | Minimum | Maximum | Mean | Std. Deviation |
| depress | 55671 | 7.00 | 32.00 | 14.3428 | 4.32651 |
| Valid N (listwise) | 55671 |  |  |  |  |

The standardised variable has its name pre-fixed with $Z$ and is appended to the end of the file.

|  | Name | Measure |  |
| :---: | :--- | :--- | :--- |
| 638 | depress | S Scale |  |
| 639 | Zdepress | 夕 Scale | Zscore(depress) |
| 640 |  |  |  |

Recalls the syntax, modifies it to produce the histogram with
freq zdepress
/his .

| Zscore(depress) |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |

Present results to non-expert audience. Rescales from 0 to 10

```
compute depress10 = (depress-8)/2.4.
freq depress10.
means depress10 by cntry by gndr.
```

z-scores: same histogram. Repeat chart edit to 12 bins. "Up the number of bins a bit" to 15 yields smoother distribution.

Draws no conclusions.
